## SUBJECT: MATHS

### **TASK 1**

‘The world always seems brighter when you’ve just made something that wasn’t there before.’ Mathematics is all around us and it plays an important role in our life. We use Math skill everywhere whether it’s buying a car, following a recipe, or decorating your home. People have been using these same principles for thousands of years, across countries and continents.

One such concept is **TESSELLATION**. What are Tessellations? A tessellation is a combination of shapes that fit together perfectly without any gaps., much like a jigsaw puzzle. The result is a symmetric design of repeating patterns, which may feature animals, persons or anything else.

Tessellations are found **EVERYWHERE** - in the classroom, in nature, or at home! Some common places where you can find tessellating patterns in: • Textiles (curtains and rugs) • A soccer ball • A basketball • Tiled ceilings and flooring • The brick foundation of a home • A metal fence • honeycomb pattern in bee hives • on historical buildings. Some examples of tessellating patterns are shown here: Look around you, for Tessellations, when you visit monuments, malls, in nature, your house or any other place of interest. Well, now that we know what tessellations are, how about putting our newfound knowledge into practice and try some cool projects?

Take an A-4 size sheet. Find an item to trace and use it to draw tessellations or cut a geometric form - like a triangle from cardboard or ,colored sheets or origami sheets and trace it in interlocking patterns to create tessellations or try to make a honeycomb tessellation by tracing a hexagon. Be the designer of your own room (wall / floor / window) and let your creative juices flow
